The Buyer shall harvest defective, diseased, crooked, and suppressed pines leaving the larger, more vigorous “crop” trees. The objective is to harvest the proper number of trees to leave an optimum stocking level of 70-90 square feet of basal area of growing Loblolly Pine timber. In areas where rows can be clearly identified, a fifth row thinning should be conducted with selected inferior trees being removed from between the rows. In areas where the rows cannot be identified, corridors should be placed approximately 50 feet apart with thinning between corridors to achieve the target basal area. Seller, or seller’s agent - William H. Lock & Associates, Inc., shall have the express right to halt all harvesting operations in the event the thinning operation is not achieving the desired basal area targets, if remaining stems are excessively damaged, or if any provisions of this contract are not being followed.

C- Creek Buffers – A) Creek buffers within the clear-cut “sale areas” are flagged blue and are considered “NO CUT” buffers. No blue flagged trees marking the buffers and no trees within the buffers are to be harvested.
